

Package ‘hammond’

June 9, 2019

Type Package

Title Useful analysis utilities

Version 0.1.0

Author David Hammond

Maintainer David Hammond <anotherdavidhammond@gmail.com>

Description Just some useful stuff for me

License GPL-3

Encoding UTF-8

LazyData true

RoxygenNote 6.1.1

R topics documented:

hammond-package	1
hcorr	2
hcountrycode	2
hcountryinfo	3
hcountryspelling	3
hdb_connect	4
hdb_get	4
hdb_get_toc	5
hdb_search	5
hpack_manual	6
hpc_change	6

--------------	----------

hammond-package	<i>hammond: some stuff</i>
-----------------	----------------------------

Description

Just some useful stuff for me

Installation

```
devtools::install_github("david-hammond/hammond")
```

hcorr	<i>hcorr</i>
-------	--------------

Description

This function calculates correlations between variables

Usage

```
hcorr(df, min.pairs = 20, verbose = TRUE, filter.by.p = FALSE)
```

Arguments

df	name of dataframe to use for correlation, needs to be long format 4 column data frame: iso3c, variablename, year, value
min.pairs	minimum number of pairs to correlate
verbose	enable n and p values reporting, TRUE or FALSE
filter.by.p	Do you want to filter for significant p values?

Examples

```
#need 4 column data frame, iso3c, variablename, year, value
```

hcountrycode	<i>hcountrycode</i>
--------------	---------------------

Description

This function calculates correlations between variables

Usage

```
hcountrycode(x)
```

Arguments

countries	list of countries
-----------	-------------------

Examples

```
#need 4 column data frame, iso3c, variablename, year, value
```

hcountryinfo	<i>hcountry_info</i>
--------------	----------------------

Description

This function calculates correlations between variables

Usage

```
hcountryinfo(df, host = NULL, password = NULL)
```

Arguments

countries list of countries

Examples

```
#need 4 column data frame, iso3c, variablename, year, value
```

hcountryspelling	<i>hcountry_spelling</i>
------------------	--------------------------

Description

This function calculates correlations between variables

Usage

```
hcountryspelling(df, host = NULL, password = NULL)
```

Arguments

countries list of countries

Examples

```
#need 4 column data frame, iso3c, variablename, year, value
```

hdb_connect	<i>hdb_connect</i>
-------------	--------------------

Description

This function calculates correlations between variables

Usage

```
hdb_connect(db = "postgres", port = 5432, user = "postgres", host,  
            password)
```

Arguments

countries list of countries

Examples

```
#need 4 column data frame, iso3c, variablename, year, value
```

hdb_get	<i>hdb_get</i>
---------	----------------

Description

This function calculates correlations between variables

Usage

```
hdb_get(vars, host = NULL, password = NULL)
```

Arguments

countries list of countries

Examples

```
#need 4 column data frame, iso3c, variablename, year, value
```

hdb_get_toc	<i>hdb_get_toc</i>
-------------	--------------------

Description

This function calculates correlations between variables

Usage

```
hdb_get_toc(db = "master", host = NULL, password = NULL)
```

Arguments

countries list of countries

Examples

```
#need 4 column data frame, iso3c, variablename, year, value
```

hdb_search	<i>hdb_search</i>
------------	-------------------

Description

This function calculates correlations between variables

Usage

```
hdb_search(vars, db = "master", host = NULL, password = NULL)
```

Arguments

countries list of countries

Examples

```
#need 4 column data frame, iso3c, variablename, year, value
```

hpack_manual	<i>create package manual</i>
--------------	------------------------------

Description

This function calculates combinations for efficient correlation calculations

Usage

```
hpack_manual(pack = "hammond")
```

Arguments

pack	name of package
------	-----------------

hpc_change	<i>Calculate proportional change</i>
------------	--------------------------------------

Description

This function calculates proportional change in GPI for a country from one year to another.

Usage

```
hpc_change(all)
```

Arguments

all	the dataframe to be processed
-----	-------------------------------

Value

Returns a dataframe containing the raw and annual growths in GPI for each country
